

SUMMARY

Software Developer with hands-on experience building full-stack web and iOS applications, with a strong focus on frontend engineering, scalable UI architecture, and user experience. Experienced in developing production-ready features using React, Next.js, TypeScript, SwiftUI, and REST APIs in Agile team environments. Strong background in API integration, reusable component development, debugging, and handling real-world application states including loading, error, validation, and edge cases. Passionate about building clean, maintainable, and scalable applications while continuously expanding backend and system design knowledge.

PROJECTS

Glowi — Full Product Platform (Web + iOS) (*Angular, React, SwiftUI, PHP, MySQL*)

Built a full-stack platform for managing schedules, payments, events, and athlete workflows with role-based system behavior
Designed scalable application architecture and relational database models for structured data management
Developed iOS application using SwiftUI and MVVM architecture with reusable UI components and state-driven design
Implemented real-world UX logic, including role-based permissions and coach-controlled athlete level management
Built responsive UI flows with loading, empty, validation, and error states to improve usability and application reliability
Improved system stability through debugging, testing, and edge case handling
Applied modern AI-assisted development workflows for UI prototyping, debugging, and productivity optimization
Designed the project as a production-style application focused on scalability, maintainability, and real-world product thinking

FluiDex Drive — iOS Application (*Swift, SwiftUI, Core Data*)

Developed iOS application with 5+ core vehicle tracking and maintenance management features
Implemented MVVM architecture for scalable and maintainable application structure
Built responsive multi-screen UI focused on usability and smooth user experience
Structured local persistence layer using Core Data

Booking System — Full-Stack Application (*Angular, PHP, MySQL*)

Developed booking system with full CRUD functionality and structured user workflows
Designed and optimized relational database schema for efficient data operations
Implemented REST-style communication between frontend and backend systems
Debugged and improved data flow, validation, and UI interactions to increase reliability

EXPERIENCE

R-A-Ones Corporation - Software Developer Intern

Brampton, ON • Jan 2026 – May 2026

Developed and shipped 5+ production-ready frontend features using React, Next.js, TypeScript, and REST APIs
Built 10+ reusable and scalable UI components, improving development consistency and efficiency
Integrated structured APIs with authentication, validation, and error handling workflows
Improved booking workflows by optimizing user flows and reducing manual steps by ~20%
Reduced UI bugs by ~30% through debugging, testing, and edge case handling
Resolved real-world frontend and data flow issues involving loading, empty, and error states
Collaborated in Agile development environment using Git workflows, pull requests, and weekly releases
Maintained clean, scalable, and maintainable codebase following modern frontend development practices

EDUCATION

MOBILE WEB DEVELOPER DIPLOMA

TORONTO, ON | TRIOS COLLEGE

EXPECTED GRADUATION: MAY 2026

SKILLS

Frontend: React, Next.js, Angular, TypeScript, JavaScript, HTML5, CSS3, Responsive Design
Backend: PHP, REST APIs, API Integration, CRUD Operations
Mobile: Swift, SwiftUI, iOS Development, Core Data, MVVM
Database: MySQL, PostgreSQL
Tools & Workflow: Git, GitHub, Swagger, Agile/Scrum, Figma, VS Code
Core Concepts: OOP, Component Architecture, Responsive Design, Debugging, Testing, Edge Case Handling, Problem Solving, Code Review
Currently Learning: Backend Systems, System Design Fundamentals
AI & Modern Development: AI-assisted development, debugging, prototyping, workflow optimization
