

SUMMARY

Software Developer with hands-on experience building full-stack and iOS applications, with a strong focus on frontend development and user experience. Experienced in developing scalable UI components, integrating REST APIs, and handling real-world application states (loading, error, edge cases). Proven ability to improve user flows and application stability through debugging and structured problem-solving. Actively expanding backend and system design skills.

PROJECTS

Glowi — Full Product Platform (Web + iOS) (*Angular, PHP, MySQL, React, SwiftUI*)

Built a full-stack platform for managing schedules, payments, and events with role-based workflows
Designed relational database models and structured application logic for scalable data handling
Implemented CRUD operations and API-ready data layer using JSON-based architecture
Developed iOS application using SwiftUI and MVVM architecture
Handled real-world application states (loading, empty, error) to improve user experience
Identified edge cases and improved system stability through testing and debugging
Applied object-oriented principles to structure maintainable and scalable code

Fluidex Drive — iOS Application (*Swift, SwiftUI, Core Data*)

Developed iOS application with 5+ core features for vehicle tracking
Implemented MVVM architecture for scalability and maintainability
Built responsive UI across multiple screens and improved user experience
Structured local data storage using Core Data

Booking System — Full-Stack Application (*Angular, PHP, MySQL*)

Developed a booking system with full CRUD functionality and user workflows
Designed and optimized database schema for efficient data operations
Implemented REST-style communication between frontend and backend
Debugged and improved data flow and UI interactions to ensure system reliability

EXPERIENCE

R-A-Ones Corporation - Software Developer Intern (Internship)

Brampton, ON • 01/2026 - Present

Developed and shipped 5+ production-ready features using React, Next.js, and REST APIs
Built 10+ reusable and scalable UI components, improving development efficiency and consistency
Improved booking workflows by optimizing user flows, reducing manual steps by ~20%
Reduced UI bugs by ~30% through debugging, testing, and edge case handling
Resolved real-world UI and data flow issues by handling loading, error, and empty states
Collaborated in Agile team environment, contributing to weekly releases using Git workflows
Worked with structured APIs, handling authentication, error responses, and data validation
Maintained clean, scalable, and well-structured codebase

EDUCATION

MOBILE WEB DEVELOPER USING AI (DIPLOMA)

TORONTO, ON | TRIOS COLLEGE

EXPECTED: MAY 2026

SKILLS

Languages: JavaScript, TypeScript, Swift, PHP, SQL
Frontend: React, Next.js, Angular, HTML5, CSS3 (Flexbox, Responsive Design)
Backend: PHP, MySQL, REST APIs
Mobile: SwiftUI, iOS Development
Database: MySQL, PostgreSQL
Core Skills: Debugging, Testing, Edge Case Handling, Problem Solving, Code Review
Tools: Git, GitHub, Figma
Concepts: OOP, MVVM, REST APIs, CRUD
Currently Learning: Backend systems, system design fundamentals
